

# Sprint 1 Team 9 Hashgraph Retrospective

Wernich Baumgarten <19896913 >  
Simon Dennis <19770235 >  
Oliver Gilbey 17839688 >  
Ryan Lang <19066171 >  
Simoné van Zyl <18395317 >  
Bernard Wiesner <19790155 >

## 1 Retrospective

- Time estimation should be taken in to account for each task (user stories should have contained this)
- Tasks should be prioritised so that dependencies are completed first
- Time estimation should include the integration of separate tasks
- Standup notes should contain realistic goals allowing team mates to accurately predict when a task will be completed
- Consider using a continuous integration tool
- Define a clearer git strategy, be clear when branches are made and when will be merged
- Break up tasks into smaller, more practical ones
- More pair programming and hours spent programming together even when implementing separate tasks
- Implement peer reviews
- Aim for a pseudo-work environment
- Commenting should be added to code for legibility
